Gentlemen: Re: Blind Persons Employed in War Industries
 in the United States as of January 1, 1943

This is a compilation of reports submitted by agencies for the blind in response to an inquiry seeking information on this subject.

Undoubtedly, this report does not include all the employment of blind persons in war industries, and no effort has been made to include blind persons employed in civilian activities or sheltered workshops making war materials. It serves to indicate only the possibilities and the fact that the employment of blind persons is not as restricted as it is commonly assumed to be by the average sighted observer. In every instance the blind worker achieves at least the same production as the sighted employee at the same task, and in most instances production rates of blind workers are higher than those of the average sighted employee, and there is usually less defective workmanship.

It will be noted that a number of individuals are classified as partially sighted. This indicates that the individual has some very limited useful vision; however, everyone listed comes within the present day accepted definition of blindness which is as follows:

"A blind person is one who has not more than 20/200 of visual acuity in the better eye with correcting lenses; or visual acuity greater than 20/200 but with a limitation in the fields of vision such that the widest diameter of the visual field subtends an angle no greater than twenty degrees."

Many employers hesitate to accept blind workers for four basic reasons; namely, Injury, Compensation, Personal Care and Labor Unions:

1. Injury. Experience shows that blind workers exercise a higher degree of care than their sighted associates and up to the present time there are no records of compensable accidents.

2. Compensation. All insurance companies, both public and private, dealing with Workmen's Compensation accept blind workers on the same basis as the sighted and there is no extra cost to the employer because of his cooperation in the employment of blind persons.

3. Personal Care. It is unnecessary for the employer to make special provision for guide service in and out, or around the plant, since all necessary service of this kind is spontaneously offered and given by sighted associates and it is unnecessary for the employer to be concerned with this subject.

4. Labor Unions. When the employment of blind persons is properly explained to Labor Unions, they are glad to accept blind persons on the same basis as sighted members.

Under no circumstances should a blind person be permitted to remain on any job unless he reaches normal production in the standard length of time required by sighted workers.

Practically all of the placements listed in this report have been secured by observing the following principles:

1. The most outstanding results are secured by agencies which employ capable blind persons who can analyze industrial processes, and by demonstration prove that selected processes can be performed satisfactorily without sight.

2. The placement agency carefully matches the qualifications of the blind person to the requirements of the job and the environment in which the person is to be employed.

3. The placement agency is permanently responsible for satisfactory performance on the part of the blind employees and relieves the sighted employer of all serious disciplinary and replacement problems.

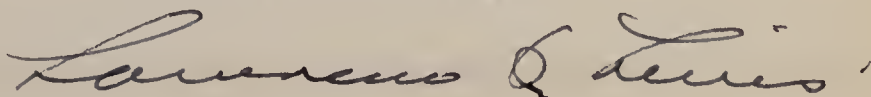

This report is prepared to assist all persons interested in and engaged in the placing of blind persons in war industries, and if further detailed explanation about any one job is required, such requests should be made directly to the agency that submitted the report.

Under no circumstances should any individual or agency contact these employer companies directly or indirectly, and all inquiries for information or employment must be directed to the placement agency which is listed in this bulletin as filing that particular part of the report. Any other procedure may result in the loss of employment to blind persons.

For brevity in this report we have kept the description of the jobs to a minimum.

Because of the fact that some corporations object to publicity, this report is not for re-publication.

Yours very truly,

Lawrence Q. Lewis
Executive Director
